SUPRA CombiCon crimp body

24K gold or Rhodium plated Copper connector crimp body with a M6 thread, a contact part which can be either a BFA/Banana or a Fork and finally a sleeve to finish up the perfect joint. The crimp body is as said, crimped on to the cable strands, a very delicate junction between cable and contact. The Supra CombiCon crimp Pliers are made by Pressmaster and it is customized to fit our bodies perfectly.

The bodies are made of solid copper, 24K gold or rhodium plated. They are provided with M6 connection, which allows optional connection with gold plated or rhodium plated spades or banana pins. All factory assembled cables are mechanically pressed under high pressure, which makes the materials an airtight, homogeneous and electrically invisible joint almost similar to fusion welding.
